Background

Jio Saavn is a digital music streaming service operating at a global level. It is a streaming music service reinventing how people listen and share music, in India and around the world. Jio Saavn has a wide variety of music and podcasts available on its platform along with originals.

It provides:

- Unlimited Music Podcast and Voice
- Expertly curated playlists and radio stations
- Smart, personalized recommendations
- Lyrics, with live sync for karaoke

The 2 main revenue systems for Jio Saavn are via:

- Paid subscription
- Advertisements

Problem statement:

As a product manager for Campaign Analytics on Intellect which is Jio Saavn's AdTech platform, you are given a business requirement to help Intellect users analyse and justify campaign ROIs to various clients (brands and agencies).

The problem statement caters to Ad-tech, that has become a key segment in the business world. To succeed in this business, it is important to become a part of the clients' omnichannel marketing strategy by giving them high Return on Ad spent.

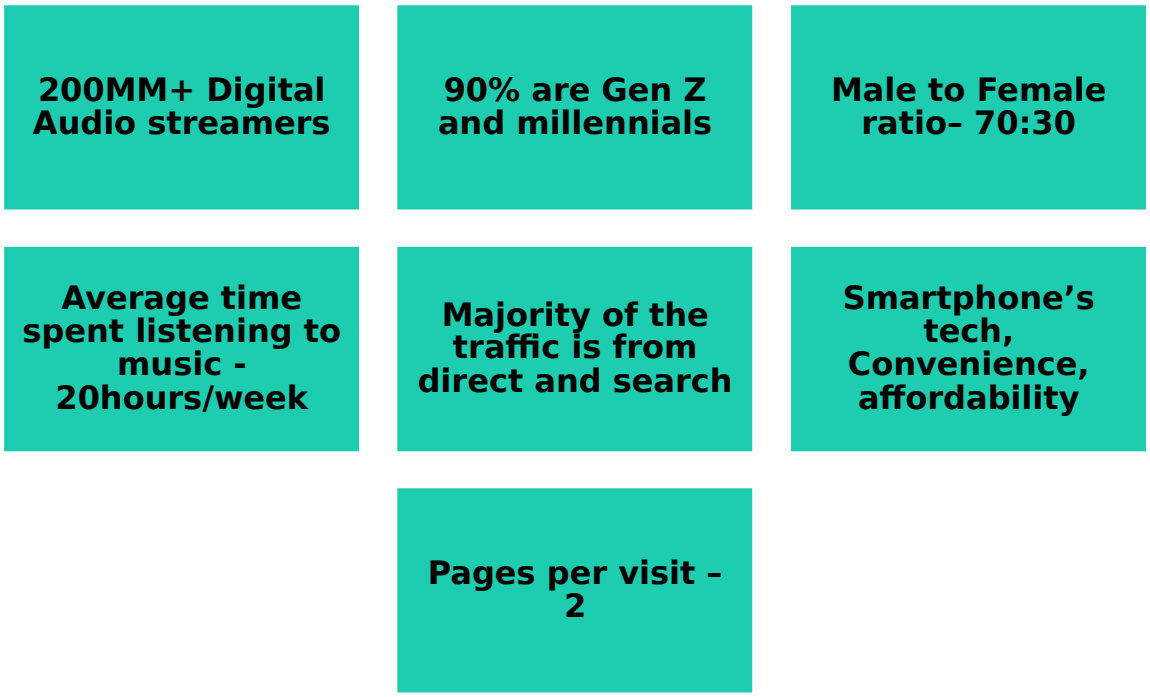

Outcome

Micro Journey within Intellect platform for Campaign Success Managers to keep a track of all the clients and their campaigns and availability of custom dashboard features to provide Campaign delivery insights (Impressions, Reach, CTR) to various clients

Research:

Secondary research

To set some foundation, I did some secondary research and evaluated the current status of JioSaavn's platform. Below are some statistics that justify the company's strong position in the Ad tech world.

Some insights into the company's strategy that make it a lucrative Ad platform:

- With increasing internet penetration, the company is aggressively capturing metros as well as tier 2,3 markets which are a point of attraction for multiple brands.
- Another interesting point is the high potential of JioSaavn because of integration with Jio ecosystem which is growing rapidly.

Primary Research

To understand the Ad tech world, I talked to 6 campaign managers and clients from different industries that gave me some useful insights into the challenges faced by them.

Challenges faced:

- **Difficulty in accessing relevant metrics:** The campaign managers have to approach the data and analytics team every time they need updated performance metrics for the campaigns which leads to increased slack time in the process.

- **Unclear and misleading dashboards:** Campaign managers need to extensively study the returns of the campaign. However, they get bogged down with a lot of unprocessed raw data and generating insights from that data is cumbersome.

- **Lack of understanding:** With so many numbers of platforms coming up, clients face difficulty in understanding each platform, what works best on that and how to get the best returns from that platform.
  Example: On Instagram, stories ad gives high return which is not true for Facebook. Similarly, the ideal Ad duration is different for different platforms.

Insights gathered:

Data explosion: A clear and easy to understand dashboard is required to demonstrate insights

Access to a dashboard summary to keep a track of all the Campaigns. Increased transparency in Dashboards and mechanism to share reports

Custom report displaying key success metrics in form of score card and charts with editable Dimensions/Metrics

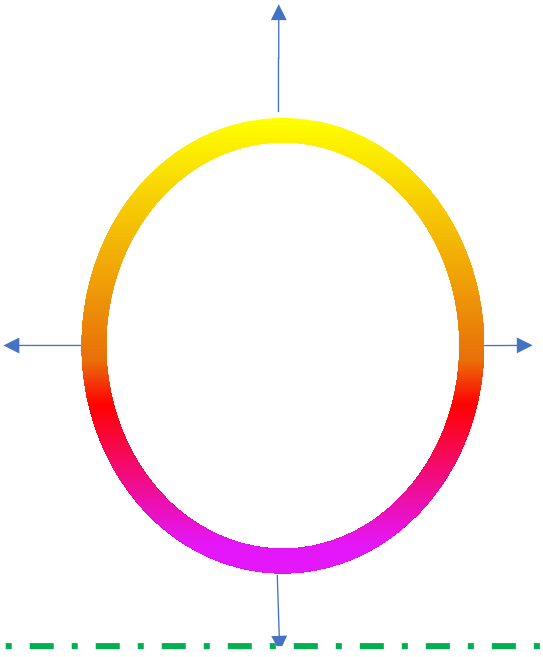

Understanding the JioSaavn Users: Various cohorts

Students

Have an interest in music and want to stay updated with latest music from different artists and genres. They invest time in exploring and curating their playlists according to their interest and trends.

Corporate person

Usually, requires music while commuting or working to deal with boredom. Do not put in much time and effort to make a playlist and go for recommended playlists by the app and friends.

Working class

Daily wage earners (from tier 1,2 ,3 cities) who listen to music in their idle time and have limited internet bandwidth.

Housewives

Segment that stays at home, listens to music while doing daily chores. This segment usually has preference for a single type of music and like to listen to that regularly. Example: Many women like listening to bhajans on phone.

JioSaavn's Ad model for campaigns

- An Ad model that charges its clients for based on per thousand impressions. This model is being used for its relevance in digital marketing where each view leads to increased brand awareness for the clients.

- Type of ads:
  Audio/Video/Image – Template fixed
  - Image ads on the very home page: The Ad updates with each Page load and approximately 200Rs CPM to be charged for this.
  - Image ads below: For this, approximately 150Rs CPM will be charged.

- Product Ads to be shown based on Demographics (Age, gender) and Location and Interest basis as per the target audience of the client.

- Additionally, Inbuilt algorithms that can determine those specific pages/sections/playlists which is being preferred by the user persona type for whom the product is made for.

  Example: A comedy show's Ads will be shown to people aged 18-40 from the city of event. However, this will be complemented by a strong algorithm promoting the Ad to people who have interest in comedy genre leading to a high relevance index for the Ad.

- Display adds to be shown at the top of each song page.

- Audio, video Advertisements will be shown to users after every 30 mins. The frequency would be to Show 4 ads (2 audio and 2 video) with each ad duration of 12 secs.

Overall users	200MM+
Monthly traffic/reach	100MM+
Expected monthly Ad impressions (30%)	30MM+
Expected monthly CTR (2%)	60K

Note: Assuming standard percentages for CTR

User persona of a campaign manager

Business and client goals

Business Goals	Client Goals
Maximising the number of collaborations with brands while maintaining a good customer experience for app users.	Increasing their ROAS through: **Ad delivery:** High impressions, reach, increased brand awareness **High Performance:** Clicks, CTRs etc.

User Stories

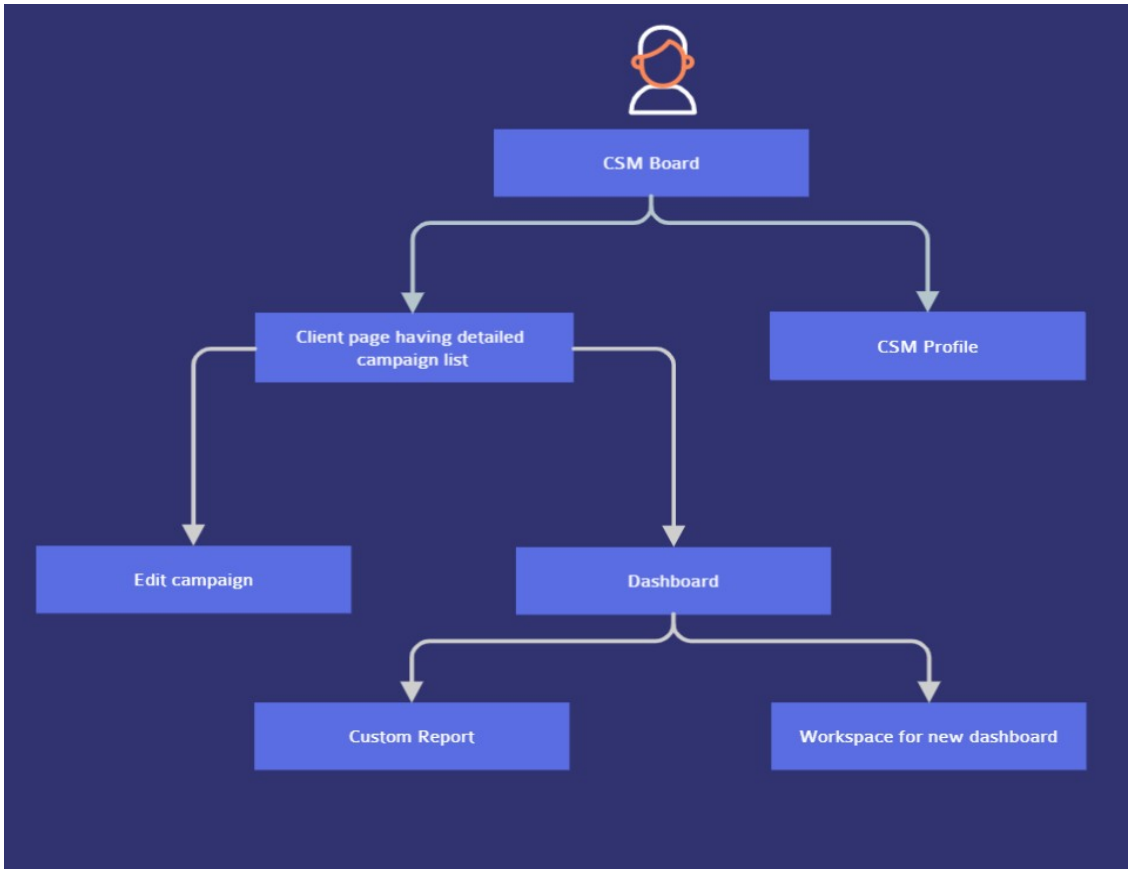

- CSM Board – CSM will be see an overview of his portfolio and have an avenue to see detailed level Campaign list of all clients.

- Campaign Level Screen – Campaign list of a specific client will be displayed with options to edit details and visit dashboard

- Campaign Dashboard – CSM will be able to view Custom Report, different templates as well as create customized report based on his requirements

- Custom report – Standard Campaign Report displaying various success metric with display charts. CSM can change Dimension, Metrics and apply filters to create customized report.

Proposed User journey of a campaign manager:

Mock ups

https://www.figma.com/proto/yFjBmp3FQNCSpObUqON0oG/JioSaavn?node-id=1%3A6&scaling=scale-down&page-id=0%3A1&starting-point-node-id=1%3A6

Detailed explanation and relevance:

CSM BOARD

- As a first step, CSM needs to have a wide overview of his/her portfolio. The consolidated dashboard will highlight various parameters like clients, campaigns, Budget, etc. These metrics will highlight the real time parameters giving a status of CSM's overall performance.

- Overall Jio Saavn metrics will help business users in benchmarking their performance with the platform average and strengthening the client's trust in the platform.

- A brief overview of each client will appear on clicking over the name card. Additionally, there will be a button to see detailed level campaign list of the client.

Client page

- A click on Detailed campaign list for any Client will take the CSM to a client page, having a list of all the campaigns being run by that specific client.

- The list will display detailed information like campaign name, objective, active status, key performance metrics related to the campaign.

- This list will help in keeping a track of all the active as well as past campaigns and will also give an option to start a new campaign.

- This screen will also mention some AI and human-generated recommendations which can help clients in strategizing their future marketing plans.

Editing an existing campaign

- This page will help the CSM and clients in editing an existing campaign as per the business requirements.

- The page will have important information like campaign name, objective, key metrics, Ad types, expected performance metrics etc.

Workspace:

- This page allows CSMs to access a standard custom report and create new reports using multiple templates

- Additionally, a list of all the past reports related to the campaign are available here for reference of the CSM.

Dashboard:

- The campaign report will give detailed insights into the campaign's performance and its impact. Both graphical and numerical representations of various KPIs like Ad views, Unique viewers, Average ad frequency, cost per click, and details like Amount spent will highlight the present status of the campaign.

- These performance metrics will provide information about the level of reach leading to brand awareness and brand recall, conversion rates and CPM/CPC which will give an estimate about the Returns being generated on the Ad spent.

- All the performance metrics can be studied extensively by segmenting them based on various parameters like demographics (Age, location, gender) or Device type, Ad type.

- An option to download or share the report will help in sharing this report with multiple stakeholders, increasing the level of convenience for the CSM and client.

Success metrics:

Lastly, Intellect's performance needs to be measured regularly to ensure its successful and efficient usage. This can be done by tracking the frequency of usage by CSMs and their user behaviour i.e., their frequency of creation and sharing of reports etc. Additionally, regular feedback sessions with the CSM team should be conducted to have continuous improvements in the tool. Some of the key metrics that can be tracked:

1) No. of reports created
2) No. of downloads
3) Daily usage time
4) Average Session time

Next Steps:

As next steps, we can provide customized dashboard logins for all the clients so that they can keep a track of their numbers and be in harmony on the various campaigns being run.

Also, we can work on building some basic rule engine that will recommend what can be done to improve Campaign performance based on campaigns data and overall Jio campaigns ad data.
